

Dalmia Bharat Sugar & Industries Ltd — Rating update 1d Credit Rating Summary

Section	Details
Agency	CARE Ratings Ltd.
Rating Change	Reaffirmed at CARE AA+ (Long Term) and CARE A1+ (Short Term).
Outlook (Current vs Previous)	Stable vs Stable
Key Drivers of Change	• Strong Parentage: Part of Dalmia Bharat Group; holds ₹568 Cr equity in Dalmia Bharat Ltd (18% of NW), providing massive financial flexibility. • Operational Efficiency: Industry-leading recovery rates (12-13% in UP, 14-15% in MH) and 12.3% Revenue CAGR (FY21-26). • Integrated Model: Diversified revenue (63% Sugar, 33% Distillery) cushions sugar cyclicity; current capacity at 43,200 TCD and 950 KLPD. • Strategic Expansion: Acquisition of Baghauli plant (100 KLPD) and 51% stake in Eagle Agrotech enhances feedstock security and scale.
Rated Instruments	• LT Cash Credit: ₹1,370.00 Cr CARE AA+; Stable • LT Term Loan: ₹531.89 Cr CARE AA+; Stable • ST BG/LC: ₹200.00 Cr CARE A1+
Key Observations	• Strengths: Geographical diversification (UP & MH) mitigates agro-climatic risks; strong liquidity of ₹1,093 Cr. • Strengths: Low term debt repayment obligations (₹70-80 Cr/year) relative to GCA (~₹370 Cr). • Risks: Revenue dipped 3% YoY (FY26) to ₹3,630 Cr due to lower cane availability in UP. • Risks: Margin contraction (PBILDT 13.06% → 12.07%) due to SAP hike (+₹30/Qtl) and static ethanol prices. • Risks: Working capital intensive with elongated cycle of 189 days (FY26) vs 171 days (FY25).
Investor Impact	• Growth: Long-term positive on ethanol blending government push; short-term volume pressure in UP. • Margins: Temporary pressure from rising raw material (SAP/FRP) costs without commensurate ethanol price hikes. • Leverage: Gearing rose (0.34x to 0.54x) due to WC debt, but remains very comfortable; no immediate dilution risk. • Asset Value: Significant "hidden" value in listed group investments (DBL) protects equity downside.
Agency / Cross Analysis	Same Agency: CARE maintained the high-investment grade rating despite a moderation in PAT (₹238 Cr in FY26 vs ₹366 Cr in FY25) and lower Interest Coverage (7.02x vs 7.76x). Conclusion: Improvement in resilience. The agency prioritizes the "Dalmia" group strength and geographic hedge over temporary industry-wide operational headwinds in the UP sugar belt.
Final Inference	Real Improvement in Resilience. Despite cyclical headwinds and margin compression, the company is using its "war chest" (liquid investments + group backing) to expand capacities. It remains a low-risk play within a high-risk sector.
