

## Jyoti CNC Automation Ltd — Nov 2025 Quarterly Analysis

### 1. VERDICT & BUSINESS QUALITY SNAPSHOT

**Result:** Beat on Revenue; Inline on EBITDA; Margin Compression YoY **One-line:** The long-term thesis remains firmly intact as the company navigates a transition year, trading short-term operating leverage for the massive scale required to fulfill a ₹4,546 Cr high-margin order book.

| Dimension                             | This Quarter                 | Signal / Evidence                                                                                      | Sentiment |
|---------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------------|-----------|
| Beat/Miss vs Guidance / Prior Quarter | Beat on Revenue YoY (+17.9%) | Q2 Revenue ₹507.9 Cr vs ₹430.7 Cr LY.                                                                  | □         |
| Earnings Quality                      | High (Operationally driven)  | Unlike Q1, Other Income normalized (₹9.1 Cr); PAT is purely core-led.                                  | □         |
| Guidance Confidence                   | Neutral                      | Management targets a steep ramp-up to 10,000 units next year; current capacity is the ceiling.         | □         |
| Management Credibility                | Strong                       | On-track with capacity expansion; positive OCF swing in H1.                                            | □         |
| Business Quality Signal               | Improving                    | Gross Margin hit 56% (+540 bps YoY), reflecting high-end tech mix.                                     | □         |
| Key Q&A Exchange                      | Q# 11 - Capacity Ramp        | Mgmt committed to 10,000 units next year; requires 100% volume growth.                                 | □         |
| The Street's Primary Anxiety          | Execution Bottleneck         | Can they deliver the back-ended H2 guidance with 88% utilization? Mgmt claims 100%+ is possible in Q4. | □         |
| Capital Cycle Stage                   | Aggressive Expansion         | Phase 2 expansion to 16,000 units p.a. is the primary value driver for FY27.                           | □         |
| Margin / Return Ratio Trajectory      | Temporary Compression        | EBITDA margins flat (24.5%) as hiring costs outpace revenue.                                           | □         |
| Pricing Power                         | Expanding                    | High-end machine realization at ₹18.26 Cr/unit proves deep moat in Aerospace.                          | □         |
| FCF Conversion & Quality              | Weak but Improving           | H1 OCF positive at ₹13.2 Cr, a significant swing from -₹93.9 Cr YoY.                                   | □         |
| Competitive Moat Signals              | Widening                     | Vertical integration (castings to spindles) allows 56% Gross Margins.                                  | □         |
| Balance Sheet Strength                | Adequate                     | Debt/Equity at 0.3x; current focus is funding H2 working capital.                                      | □         |
| Working Capital Efficiency            | Stressed                     | Unbilled revenue at ₹673.8 Cr reflects long-cycle Aerospace projects.                                  | □         |
| Mgmt Guidance Track Record            | Reliable                     | Consistent on the "40/60" H1/H2 revenue split.                                                         | □         |
| Key Vulnerability / Red Flag          | Employee Cost Overhang       | Employee costs grew 33% YoY, suppressing the 540 bps Gross Margin gain.                                | □         |
| Management Tone                       | Bullish / Execution-focused  | Confident in hitting 90-100% utilization in H2.                                                        | □         |

**Key Takeaways (Positives & Negatives):** \* **Positives:** The business continues its structural shift toward high-complexity machines, with **Gross Margins expanding to 56%** (up 540 bps YoY). The Order Book has reached a record **₹4,546 Cr**, with Aerospace & Defense maintaining a dominant 40% share. Management achieved a critical pivot to **positive Operating Cash Flow** in H1 (₹13.2 Cr), signaling better inventory management despite the scale-up. \* **Negatives:** Operating leverage is currently being "sacrificed" to build management bandwidth; **Employee costs (up 33% YoY)** and Other Expenses (up 58% YoY) completely offset the Gross Margin gains, keeping EBITDA margins flat at 24.5%. The reliance on **unbilled revenue (₹673.8 Cr)** remains high, creating a gap between P&L recognition and cash collection. \* **The Street's Concern:** Analysts are questioning the feasibility of jumping from ~5,000 machines p.a. to 10,000 machines p.a. next year. Management's response: "This is our commitment." The ramp-up in Huron (France) and the Sept 2026 domestic expansion are non-negotiable for the stock's next re-rating. \* **Forward Watchpoint: Q4 FY26 Utilization.** If management successfully pushes utilization above 100% in Q4 as claimed, it validates their ability to handle the 10,000-unit volume target for FY27.

## 2. BUSINESS PERFORMANCE

### 2A. KEY METRICS

| Metric                | Current Qtr (Q2FY26) | YoY Change | QoQ Change | Trend | Mgmt Commentary                                                        |
|-----------------------|----------------------|------------|------------|-------|------------------------------------------------------------------------|
| Volume (Units)        | 1,315                | ↑ 17.5%    | ↑ 17.7%    | ↑     | Higher entry-level (1,237) and mid-level (69) volume vs Q1.            |
| ASP (₹Lakh/unit)      | 38.6                 | ↑ 0.3%     | ↑ 5.1%     | →     | ASP stabilized; High-end realization is ₹18.26 Cr/unit (9 units).      |
| Revenue (₹Cr)         | 507.9                | ↑ 17.9%    | ↑ 23.8%    | ↑     | Growth driven by volume expansion and steady demand in Aero/Defense.   |
| Gross Margin (%)      | 56.0%                | ↑ 540 bps  | ↑ 10 bps   | ↑     | Driven by high degree of vertical integration and product mix.         |
| EBITDA (₹Cr)          | 124.6                | ↑ 16.9%    | ↑ 24.3%    | ↑     | Operating profit grew in-line with revenue; leverage limited by costs. |
| EBITDA Margin %       | 24.5%                | ↓ 20 bps   | ↑ 10 bps   | →     | Compression due to pre-hiring 1,000+ engineers for expansion.          |
| PAT (₹Cr)             | 85.5                 | ↑ 12.7%    | ↑ 19.7%    | ↑     | Slower than EBITDA growth due to higher Finance Costs (₹14.2 Cr).      |
| Order Book (₹Cr)      | 4,546                | ↑ 35.1%    | ↑ 3.0%     | ↑     | Intake of ₹619 Cr in Q2; Aero/Defense leads at 44% of intake.          |
| Cash Flow (OCF) (₹Cr) | 13.2 (H1)            | ↑ 114%     | N/A        | ↑     | Significant improvement from -₹93.9 Cr in H1FY25.                      |
| Net Debt / Equity (x) | 0.3x (approx)        | ↓ 0.3x     | →          | ↑     | Strong balance sheet post-IPO; funding expansion via accruals.         |
| Working Capital (₹Cr) | 673.8                | ↑ 25.2%    | ↑ 25.2%    | ↓     | Unbilled revenue (Other Financial Assets) grew from ₹538 Cr.           |

### 2B. SEGMENT BREAKDOWN (End-User Industry Mix)

| Segment             | Revenue (₹ Cr) | Revenue Mix (%) | Trend | vs Company Avg | Key Development                                           |
|---------------------|----------------|-----------------|-------|----------------|-----------------------------------------------------------|
| Aerospace & Defense | 182.8          | 36%             | ↓     | Higher         | Dominant segment; 40% of total order book is here.        |
| Auto & Auto Comp    | 132.1          | 26%             | →     | In-line        | Resumed traction; focuses on Alloy Wheel Turning/EV.      |
| General Engineering | 106.7          | 21%             | ↑     | In-line        | Broad-based demand across 200+ product variants.          |
| EMS                 | 10.2           | 2%              | ↓     | Lower          | Slower execution; large backlog (₹706 Cr) expected in Q4. |
| Die & Mould         | 50.8           | 10%             | ↑     | Lower          | High-precision segment growing steadily.                  |

### 3. MANAGEMENT OUTLOOK & EXECUTION TRACKER

| Dimension | Category            | Management Target / Claim   | Required Run-Rate / Mathematical Feasibility                                     | Historical Delivery | Risk Flag |
|-----------|---------------------|-----------------------------|----------------------------------------------------------------------------------|---------------------|-----------|
| Guidance  | Revenue             | 30-35% CAGR for 3-5 years.  | Needs ~₹1,300 Cr in H2 to hit 30% FY26 growth. Feasible given 40/60 seasonality. | Delivered           | Low       |
| Guidance  | Margins             | Sustainable 24-25% EBITDA.  | Requires overhead absorption in high-volume Q4.                                  | In-line             | Medium    |
| Guidance  | Capacity            | 16,000 machines by Sept'26. | Construction on assembly/machine shops in final phase.                           | On-track            | Medium    |
| Guidance  | Volumes             | 10,000 machines in FY27.    | Requires 100% growth from ~5k current base.                                      | TBD                 | High      |
| Strategy  | Product Development | HUMA HMI / Controllers.     | 12-18 month timeline for proprietary controller prototype.                       | Ongoing             | Medium    |
| Strategy  | Regional Expansion  | Huron (France) Hub.         | Target €70-75M top line (up from €32M).                                          | Commenced           | Low       |
| Balance   | Working Capital     | 150-160 day cycle target.   | Needs aggressive billing of ₹673 Cr unbilled assets in H2.                       | Improving           | High      |

## 4. ANALYST Q&A

---

| Q# | Relevance | Analyst / Firm          | Theme Cluster  | Category          | Underlying Concern                                                                                                                  | Management Response & Investment Implication                                                                                                                                                                                                                                         | Evaded | Cred. | Verdict     |
|----|-----------|-------------------------|----------------|-------------------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------|-------------|
| 1  | 4.0       | Harshit Patel / Equirus | Utilization    | Capex             | "In this interim period of three to four quarters, how do we plan to grow meaningfully, given that we have such a huge order book?" | Management admitted current capacity (6k) is a constraint but aims to "stretch" utilization beyond 100% in Q4 through process optimization. Implication: Revenue upside in FY26 is capped by the current floor space until the Sept 2026 expansion goes live.                        | None   | 4.0   | Realistic   |
| 2  | 4.5       | Harshit Patel / Equirus | Aero/ Defense  | Business Overview | "Where these [Aero/ Defense] orders have come from? And out of these ₹425 crore, what would be the India contribution?"             | Management clarified that ₹180 Cr of H1 intake came from Indian Ordnance factories/ Defense players, with the rest from global hubs like Germany, Turkey, and China. Implication: Domestic defense indigenization is no longer just a "story"—it is actively converting to firm POs. | None   | 5.0   | Quantified  |
| 3  | 4.0       | Aniket Jain / YES Sec   | Employee Costs | Financials        | "When do you plan to complete this hiring program that you are                                                                      | Management stated they have already hired 80-90% of the required workforce for the next                                                                                                                                                                                              | None   | 4.0   | Directional |

| Q# | Relevance | Analyst / Firm        | Theme Cluster        | Category          | Underlying Concern                                                                    | Management Response & Investment Implication                                                                                                                                                                                                                    | Evaded | Cred. | Verdict         |
|----|-----------|-----------------------|----------------------|-------------------|---------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------|-----------------|
|    |           |                       |                      |                   | currently undergoing?"                                                                | capacity leg, with headcount costs now "stabilized." Implication: Operating leverage should kick in during H2 as revenue scales against this fixed-cost base.                                                                                                   |        |       |                 |
| 4  | 4.5       | Aniket Jain / YES Sec | EMS Execution        | Business Overview | "Have the [EMS] deliveries resumed now? Or will these continue going forward?"        | Management expects a minor ramp in Q3 but the bulk of the ₹706 Cr EMS backlog to execute in Q4 FY26. Implication: FY26 guidance rests heavily on a "perfect" Q4 execution in the electronics segment.                                                           | None   | 3.5   | Timing specific |
| 5  | 3.5       | Anuj / Kotak Sec      | Vertical Integration | Business Overview | "To what extent are we vertically integrated to have achieved these kind of margins?" | Management highlighted in-house manufacturing of critical components (spindles, turrets, castings) that competitors typically import from Japan/ Europe. Implication: High vertical integration acts as a structural margin floor, protecting the business from | None   | 5.0   | Specific        |

| Q# | Relevance | Analyst / Firm         | Theme Cluster   | Category   | Underlying Concern                                                                                         | Management Response & Investment Implication                                                                                                                                                                                                             | Evaded | Cred. | Verdict   |
|----|-----------|------------------------|-----------------|------------|------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------|-----------|
|    |           |                        |                 |            |                                                                                                            | currency/<br>import<br>inflation.                                                                                                                                                                                                                        |        |       |           |
| 6  | 4.0       | Yash Patel / Kotak AMC | HUMA Patent     | Strategy   | "What would be the margin impact after this panel has been developed?"                                     | Management expects a 4-5% Gross Margin expansion once proprietary controllers and motors are integrated with the HUMA interface (12-18 month prototype). Implication: Long-term margin target of 30%+ EBITDA is dependent on this R&D success.           | None   | 3.0   | Long-term |
| 7  | 4.0       | Kamlesh Bagmar / Lotus | Staff Costs     | Financials | "Employee cost has risen by roughly around 43% year-over-year... why are we seeing such a sharp increase?" | Management attributed the Q2 spike to annual salary increments and arrears dating back to April, alongside front-loaded hiring for the new capacity. Implication: This is a "clean" cost base now; the YoY comparison will normalize in future quarters. | None   | 4.0   | Plausible |
| 8  | 4.0       | Kamlesh Bagmar / Lotus | Marketing Costs | Financials | "Even on the other expenses side... where                                                                  | Management noted that Q2 included significant costs for the                                                                                                                                                                                              | None   | 4.0   | Clear     |

| Q# | Relevance | Analyst / Firm        | Theme Cluster     | Category           | Underlying Concern                                                                                        | Management Response & Investment Implication                                                                                                                                                                                                         | Evaded | Cred. | Verdict      |

|    |           |                          |                   |                    |                                                                                      | revenue won't convert to cash.                                                                                                                                                                                                                |        |       |             |
| 11 | 4.5       | Depesh Kashyap / Invesco | FY27 Volumes      | Management Outlook | "10,000 is a very big steep jump... Do you think it is possible?"                    | Management stood by the 10,000 unit commitment, noting they have already committed these deliveries to customers. Implication: The market will likely discount this target until the Sept 2026 expansion is physically commissioned.          | None   | 3.0   | High Stakes |
| 12 | 4.0       | Nishant / Kotak AMC      | Import Dependency | Business Overview  | "How much of it is currently built in-house and how much of it is kind of imported?" | Management disclosed 30% of total purchases (controllers, bearings, sensors) are still imported from Japan and Germany. Implication: The business remains vulnerable to JPY/EUR volatility until the proprietary controller project succeeds. | None   | 5.0   | Quantified  |

**PATTERN FLAGS & SENTIMENT** \* **The "Pre-Hiring" Drag:** Analysts were highly focused on the mismatch between headcount costs (up 43% YoY) and revenue (up 18%). Management successfully framed this as a "prerequisite for precision," arguing that high-end CNC assembly requires 1-2 years of training, necessitating hiring *before* the capacity goes live. The sentiment here shifted from concern to "monitoring for H2 leverage." \* **Capacity Skepticism:** There is a clear tension between the 4,500 Cr order book and the current 6,000 machine capacity. Analysts repeatedly poked at how the company can fulfill orders with two-year lead times. Management's posture was confident, almost aggressive, about stretching utilization beyond 100% in the "seasonal" fourth quarter. \* **Analyst Sentiment Verdict:** Analysts are **cautiously optimistic**. While the Q2

profitability was "noisy" due to arrears and exhibition costs, the H1 positive OCF and the 56% Gross Margin were viewed as significant quality wins. Management's credibility remains high, but they have boxed themselves into a corner where a failure to deliver a "massive" Q4 would break the growth narrative.

**GUIDANCE GAPS REVEALED IN Q&A** | Topic | What Mgmt Claimed (Opening / Prior Q) | What Q&A Revealed | Gap / Walk-back | Risk to Thesis |

|-----|-----|-----|-----|-----| | FY27 Volume | Scalability to 16,000 units. | Commitment of 10,000 units for next year. | Clarified the immediate target is a 100% jump, not the full 16k capacity. | Execution risk is higher than previously modeled. | | EMS Timing | Delivery throughout FY26. | Bulk of execution pushed to Q4. | Execution is now "lumpy" rather than linear. | Quarter-end concentration risk. |

5. WHAT CHANGED vs PRIOR QUARTER

| What Changed        | Prior Quarter (Q1FY26)         | This Quarter (Q2FY26)            | Direction           |
|---------------------|--------------------------------|----------------------------------|---------------------|
| Earnings Quality    | Bolstered by ₹16 Cr Forex Gain | Core-led (Forex gain normalized) | ↑                   |
| Utilization         | 75%                            | 88%                              | ↑                   |
| Cash Flow           | Negative (H1 FY25)             | Positive ₹13.2 Cr (H1 FY26)      | ↑                   |
| Gross Margin        | 55.9%                          | 56.0%                            | → (Stable High)     |
| Unbilled Revenue    | ₹538.2 Cr                      | ₹673.8 Cr                        | ↓ (Increasing drag) |
| Aero/Defense Intake | ₹148 Cr (est)                  | ₹272 Cr                          | ↑                   |
| Huron Ops           | Pending commissioning          | Fully operational (since Sept)   | ↑                   |
| Proprietary Tech    | Concept / Patent               | R&D prototype phase (12-18m)     | ↑                   |
| Finance Costs       | ₹12.1 Cr                       | ₹14.2 Cr                         | ↓ (Cost increase)   |
